Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Customer Problem Statement

The problem statement is written from the perspective of the ServiceNow user who is responsible for maintaining employee records. The focus is on accurate spreadsheet-to-ServiceNow data import, validation, duplicate prevention, and visibility of employee information.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a ServiceNow administrator or employee-data manager	import employee information from a spreadsheet into ServiceNow accurately and efficiently	manual entry and inconsistent data handling can be time-consuming and may introduce errors	employee data arrives in spreadsheet form and must be mapped, transformed, validated, and maintained in ServiceNow	concerned about data accuracy, completeness, and the effort required to maintain reliable records
PS-2	a Service Desk / ServiceNow user responsible for employee records	keep imported employee records current when spreadsheet data is imported again	repeated imports can create duplicate records if existing employees are not identified correctly	the same employee may appear in multiple import files and needs to be matched using a unique identifier	concerned about duplicate records and inconsistent employee information

Selected Core Problem

ServiceNow needs a reliable spreadsheet-import process that can transform employee data into the target Employee Test table, correctly map fields, update existing employees without creating duplicates, and provide clear visibility of the imported employee data through reports and a dashboard.

Why this problem matters

A structured import process reduces dependence on manual record creation, supports consistent field mapping, helps maintain employee-data integrity during repeated imports, and makes the resulting information easier to monitor through reports and the Employee Analytics Dashboard.

Documentation note: The supplied template asks for customer-perspective problem statements. The statements above are project-aligned to the documented ServiceNow spreadsheet import workflow.
