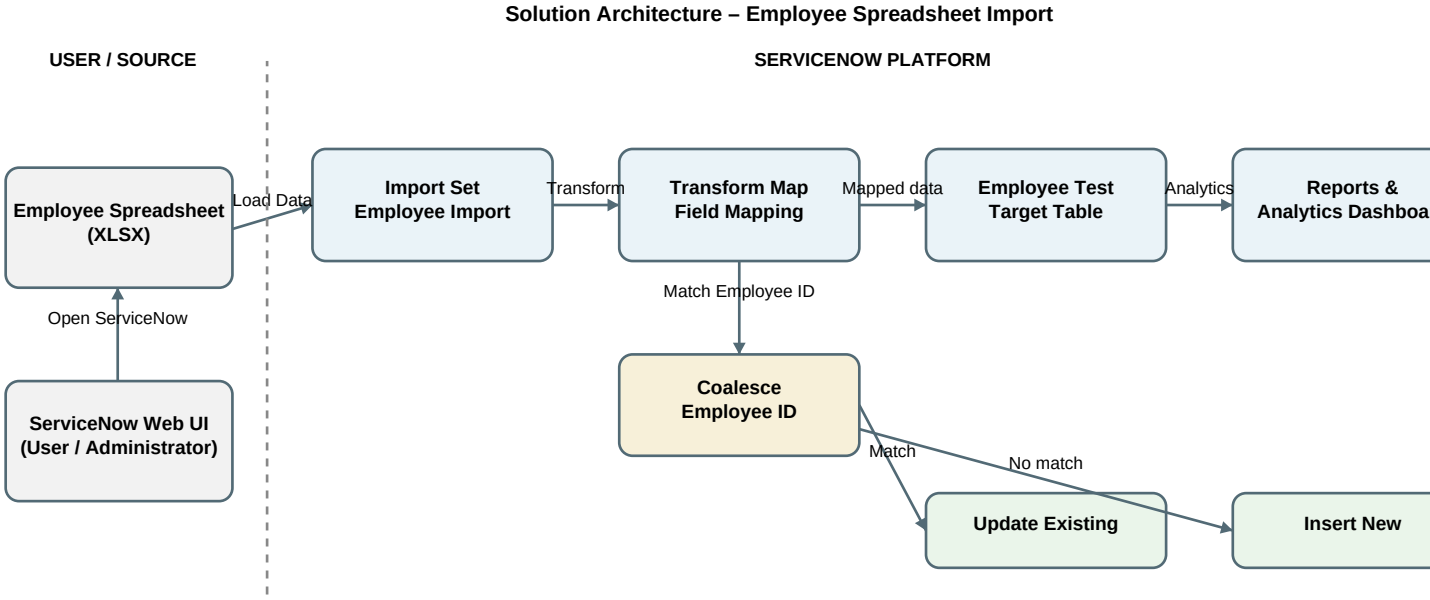
Project Design Phase

Solution Architecture

Date	02 October 2026
Team ID	SWTID-2026-9088
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Solution Architecture

The solution architecture bridges the employee-data migration problem with the ServiceNow technology solution. The architecture shows how a spreadsheet is loaded into the ServiceNow Import Set, transformed through a Transform Map, stored in the Employee Test target table, and presented through reports and the Employee Analytics Dashboard. Coalesce uses Employee ID to determine whether an existing record should be updated or a new record inserted.



Architecture flow: Employee Spreadsheet → Import Set (Employee Import) → Transform Map → Employee Test → Reports & Employee Analytics Dashboard. Coalesce operates during transformation using Employee ID for record matching.

Architecture Components

Component	Role in the solution
Employee Spreadsheet	Source file containing employee data to be imported.
ServiceNow Web UI	Interface used by the administrator to load data, configure/import the Transform Map, and review results.
Employee Import / Import Set	Staging area that receives the spreadsheet data before transformation.
Transform Map	Defines the mapping between source Employee Import fields and target Employee Test fields and performs the transformation.
Coalesce – Employee ID	Identifies matching employee records during repeated imports so existing records can be updated instead of duplicated.
Employee Test	Custom target table where transformed employee records are stored.

Component	Role in the solution
Reports	Provide employee views such as department, location, and employee list.
Employee Analytics Dashboard	Combines the configured employee reports into a centralized analytical view.

Solution Characteristics

Aspect	Project-specific description
Data flow	Spreadsheet data moves through staging, transformation, target storage, and analytics.
Data integrity	Field mapping and Coalesce support consistent transformation and duplicate prevention.
User interaction	The administrator performs import and validation tasks through the ServiceNow web interface.
Output	Validated Employee Test records and employee reports/dashboard.
Scalability	The Import Set and Transform Map approach supports additional spreadsheet records and repeated imports.

Template alignment: The supplied Solution Architecture template explains that architecture should describe the structure, characteristics, behavior, features, development/solution requirements, and specifications of the solution. This document applies those concepts to the documented ServiceNow workflow.
